MICA2

The MICA2 Mote is a third generation mote module used for enabling low-power, wireless, sensor networks. The MICA2 Mote features several new improvements over the original MICA Mote. The following features make the MICA2 better suited to commercial deployment:

• 868/916MHz, 433 or 315MHz multi-channel transceiver with extended range
• TinyOS (TOS) Distributed Software Operating System v1.0 with improved networking stack and improved debugging features
• Support for wireless remote reprogramming
• Wide range of sensor boards and data acquisition add-on boards
• Compatible with MICA2DOT (MPR500) quarter-sized Mote

TinyOS 1.0 is a small, open-source, energy efficient, software operating system developed by UC Berkeley which supports large scale, self-configuring sensor networks. The source code and software development tools are publicly available at:

Processor and Radio Platform (MPR400CB):

The MPR400CB is based on the Atmel ATmega128L. The ATmega128L is a low-power microcontroller which runs TOS from its internal flash memory. Using TOS, a single processor board (MPR400CB) can be configured to run your sensor application/processing and the network/radio communications stack simultaneously. The MICA2 51-pin expansion connector supports Analog Inputs, Digital I/O, I2C, SPI, and UART interfaces. These interfaces make it easy to connect to a wide variety of external peripherals.

Sensor Boards:

In addition to the MTS101 and MTS300/310 series, Crossbow offers a variety of sensor and data acquisition boards for the MICA2 Mote. All of these boards connect to the MICA2 via the standard 51-pin expansion connector. Custom sensor and data acquisition boards are also available. Please contact Crossbow for additional information.

Base Stations:

A base station allows the aggregation of sensor network data onto a PC or other computer platform. Any MICA2 Processor/Radio board (MPR4x0) can function as a base station when it is connected to a standard PC interface or gateway board, such as the MIB510CA serial interface board. The MIB510CA provides an RS-232 serial interface for both programming and data communications. Crossbow also offers a stand-alone gateway solution, the MIB600CA for TCP/IP-based Ethernet networks.
